Is It Time To Rebuild Your Greens?

View The "Is It Time To Rebuild Your Greens?" Collection Now

Is it time to rebuild your greens? With use comes wear, and when that wear becomes excessive, it is time to reconstruct a putting green. As putting greens go through their normal life cycle, there are a few factors that help determine when the time is right for a complete redesign of your green. With a thorough gathering of data and a careful analysis of that data, a new plan can be created. BBCP (Bermuda Bent Crossed Paspalum) has been a popular choice for this type of project, as it offers a low-maintenance alternative to traditional bentgrass greens. It is also capable of withstanding the same pressures as those on a well-maintained bentgrass green. It is the goal of the Green Section Record to provide information that can assist course decision makers in making informed decisions about when and how to complete a complete greens reconstruction. The information provided is based on the factors that can affect turf growth, putting green performance and the type of conditioning that can be provided. A basic understanding of these factors, along with the ability to absorb the sun's energy, which is then used for growth and photosynthesis, are important for healthy turf and optimal putting green performance.

NORTHEAST REGION

Interested candidates should visit this page for more information.

USGA Green Section Career Opportunities: Now Accepting Applications

Applications are now being accepted for an agronomist position based in its Columbus, Ohio, office. Candidates must possess excellent written and oral communication skills and the desire to provide high-quality progressive products and services. Interested candidates with a minimum of five years of relevant golf course industry work experience should visit this page for more information.

Position Now Open: Regional Director, Southeast Region

The USGA seeks a Regional Director for Southeast with extensive experience in agronomy supporting the golf industry. The director is responsible for overseeing activities within the Southeast Region. A primary focus is to develop and disseminate sustainable educational products communicating the principles of sustainability, turfgrass science, and golf course management practices to broad audiences, such as golf course officials, golf course management personnel, golfers, regulatory agencies, and the general public.

Position Now Open: Manager, Green Section Education

Applications are being accepted for the Manager, Green Section Education position. This position will manage the development of supporting articles, a photo gallery and videos that provide additional, relevant supporting materials. In addition to the major article, each digital collection includes a photo gallery and videos that provide additional, relevant supporting materials. The collections can be viewed online in a user-friendly digital magazine format, providing an easy-to-navigate platform for readers to access the most relevant information.
