In Case You Missed It

Best Management Practice Case Studies

Dave Oatis provides a lesson in tree management by looking at history of trees, how they made it to golf courses, and why they must be managed carefully. View Now

Video: Managing Trees on the Golf Course

The right tree in the right location can be a priceless asset to a golf course, but trees that adversely affect turfgrass health or playability are liabilities. View Now

BMPs in golf course management are critical for the protection and efficient utilization of our most valuable resources. Best Management Practices (BMPs) are broad principles. The golf course manager implements these concepts with specific actions pertinent to the golf course. View Now

The USGA Internships page.

Are you looking to join a dynamic team that works together to promote and conserve the true spirit of the game of golf? Applications are now being accepted for 2016 internships with the USGA Internship Program - Now Accepting Applications.

Policies for the Reuse of USGA Green Section Publications

1) Adherence to all components of our Conditions for Reuse policy.
2) Inclusion of the appropriate Reprint Permission Language.
3) Notification of your Intent To Reprint Content.

The USGA Green Section is divided into four regions staffed by agronomists who work with golf facilities on care of the golf course. USGA agronomists provide regular regional updates outlining current issues and observations from the field. Be sure to view updates from multiple regions as featured ideas, techniques and solutions to problems often apply to other parts of the country.

REGIONAL UPDATES

NORTHEAST REGION

While the unusually warm weather has been great for golf, it could be complicating winter preparations -- especially where warm-season turf types are maintained. This is the time of year when the turf manager needs the best of all worlds. View Now

WEST REGION

Are you looking for a fun, creative way to grow the game of golf at your facility? Look no further! Golf House has a golf cart game window that you can use to do just that. View Now

SOUTHEAST REGION

Turf reduction reduces the consumption of valuable resources and provides a striking contrast to highly maintained turfgrass areas. The Wilmington Country Club in Wilmington, Delaware, became one of the first sand-green courses in the United States. Greens that don't have a blade of grass on them -- just oiled tee surfaces, wide bunkers and the sand on the greens are all examples of high maintenance. View Now

CENTRAL REGION

In the desert, water is the most precious resource. Only one golf course admission can fill a 24-gallon home toilet tank in just 4 minutes. The golf course at the Omni Parker Palm Springs Resort in the Coachella Valley, California, plays a role in the water recovery process. Read More

The November 6, 2015 issue of the USGA Green Section Record is your go-to source for information about managing and maintaining your golf course. View Now
