Exposure to winter weather can be dangerous. Be aware of these three things about winterkill.

### Winterkill

Winterkill is a catch-all term used to describe various forms of turfgrass damage that occur during winter. It may seem counterintuitive, but even though golf courses across much of the country are disguised by a layer of snow, playing surfaces are still vulnerable to damage during winter. It is important to understand this phenomenon, golfers should know what causes winterkill. This condition occurs as a result of different weather elements, including extreme cold, subfreezing temperatures, and moisture. Some participating courses were even recently selected to receive GSCAA Environmental Leader Awards.

Audubon International has long helped golf courses protect the environment and preserve the natural heritage of the game of golf. With support from the USGA, their Cooperative Sanctuary Program for Golf has helped many golf facilities contribute to the environmental conversation.
