Audubon International has partnered with the Monarch Joint Venture, the largest collaborative effort in monarch conservation. Audubon International is helping golf courses protect monarch populations by facilitating the establishment of monarch habitat. Visit the Monarchs in the Rough website for resources to get started.

Winter's Impact On The Putting Green

Putting greens can get injured during winter. The event is open to any golf course worldwide. The long winter has you concerned about turf damage? The USGA is hosting a workshop at Pine Lakes Golf Course in Myrtle Beach, South Carolina, on April 24, 2018, from 8 a.m. to 11:30 a.m. EDT. USGA Agronomists will present information on Winter Injury, Putting Green Recovery From Winter's Impact On The Putting Green, and Winter's Impact On The Putting Green. Concerned about winter injury? Putts, birdies, and eagles. Golfers are eager to start sinking par and birdie putting on their home lawn. It's quite amazing what carefully growing your lawn can do for your putting game.

Does the long winter have you concerned about putting greens? Turf covers are very helpful for protecting your putting surfaces from injury. Taking some additional measures can further enhance your cold weather protection program. Preparing putting greens for the season requires knowing how to anticipate winter injury and how to make the necessary adjustments to reduce these effects. The May 4, 2018, issue of the USGA Green Section Record will explore the action and challenges and misconceptions surrounding their use of wetting agents as well as some of the missteps to avoid when trying to optimize their use.

Golf courses use distinct mowing heights to distinguish between different playing surfaces, whether newly constructed or recently renovated. A putting green mowing height is different than that of a tee or fairway. The mowing heights you select will affect how your putting green looks and how it plays. The mowing height you select will also affect how heavily you cut your greens. The Golfer's Guide to Mowing Heights will help you get started.

Understanding Mowing Heights

Understanding Mowing Heights is never too early to start monitoring salts in the is April 20, 2018, from 8 a.m. to 11:30 a.m. EDT. USGA Agronomists will present information on Winter Injury, Putting Green Recovery From Winter's Impact On The Putting Green, and Winter's Impact On The Putting Green. Concerned about winter injury?
