

A New Power Putting Green Mower

This machine weighs 165 pounds, and the weight is evenly distributed on the large aluminum rollers, reducing the pressure per unit of surface to a minimum, thereby eliminating the danger of packing the soil of the greens excessively. The large rollers are operated direct from the motor through an expanding ring clutch and are separated by an auto type differential which eliminates any danger of scuffing or scarring of the turf in turning.

The machine cuts a 19-inch swath. This narrow cut and the compactness of the machine, together with the guard roller in front, enables it to cut undulated greens without scalping the high points. The speed of this machine and the ease with which it is operated enables one man to do approximately the work of two men with hand mowers.
