HOW IT'S DONE

FLOATING AQUATIC PLANT PLATFORMS

BY JOHN FOY

LITTORALLY SPEAKING

LITTORAL ZONES PLAY AN IMPORTANT ROLE IN THE HEALTH OF LAKES AND PONDS

Todd Lowe, senior agronomist, Florida Region

Lakes and ponds are important features on golf courses. In addition to providing strategic value on golf holes, lakes enhance golf course aesthetics and create habitats for wildlife. Some might feel that a green, grassy, lake bank that slopes down to a clear body of water is the ideal standard. Some may feel that aquatic plants create a "dirty" look along a shoreline and make it difficult to find lost balls. However, aquatic plants can be an important component of water bodies, and certain aquatic plant species should be encouraged.

Vegetated littoral zones improve water quality and can be attractive features.

IS YOUR COURSE CONSIDERING PUTTING GREEN CONSTRUCTION?

A very positive sign that golf is on the rebound is the significant increase in the number of questions the USGA Green Section is receiving regarding putting green construction. While new golf course construction is still slow, many courses are considering renovating or completely rebuilding their greens. While renovation might be as simple as changing to a new grass, reconstruction usually involves completely replacing the rootzone and underlying drainage system at a minimum. Complete reconstruction, while obviously more expensive, also offers the chance to upgrade the architecture of the greens, surrounding turf areas and greenside bunkering.

If your course is considering a reconstruction project the first step should be to thoroughly review the documents listed below. Whether you build your greens according to USGA recommendations or not, these documents provide valuable insight into the planning, testing, quality control and construction processes:

[USGA Recommendations For A Method Of Putting Green Construction](#)

[Building The USGA Green- Tips For Success](#)

[Determining The Need For Reconstruction - Do The Greens Need To Be Rebuilt? \(article\)](#)

[Do We Need To Rebuild Our Greens? \(video\)](#)

[Quality Control Guidelines](#)

[Helping Your Greens Make The Grade](#)

[Physical Soil Testing Laboratories](#)

There are additional articles and videos on the [USGA website](#).

The USGA also offers a comprehensive DVD/CD set entitled, "[Building a USGA Green](#)". This is a two-volume set containing: a DVD detailing the USGA method of putting green construction and a CD with valuable supplemental documents to be used as references for all facets of putting green construction and renovation. [This set can be ordered on the USGA website](#).

Finally, be sure to include the Green Section agronomic staff in your project. They can help with every aspect of the project from the determination of whether or not the greens should be rebuilt to the actual construction process all the way through grow-in. For more about the Green Section's Course Consulting Service [visit our website](#).
