

Latest From Course Care

FOR THE GOLFER

Does Intermediate Rough Make Sense For Your Course?

A strip of intermediate rough around fairways is a common sight at golf courses, but does this concept from championship golf make sense for regular play? Are the costs worth the benefits?

NORTHEAST

To Treat or Not to Treat

Controlling white grubs in the fall is problematic. Applying an insecticide now might not be the best strategy – you may be better off focusing on recovery.

CENTRAL

Don't Spend Money Without a Plan

Increased play and revenue has meant increased interest in course improvement projects. Before any major changes are made, it would be a sound decision to invest in a master plan.

SOUTHEAST

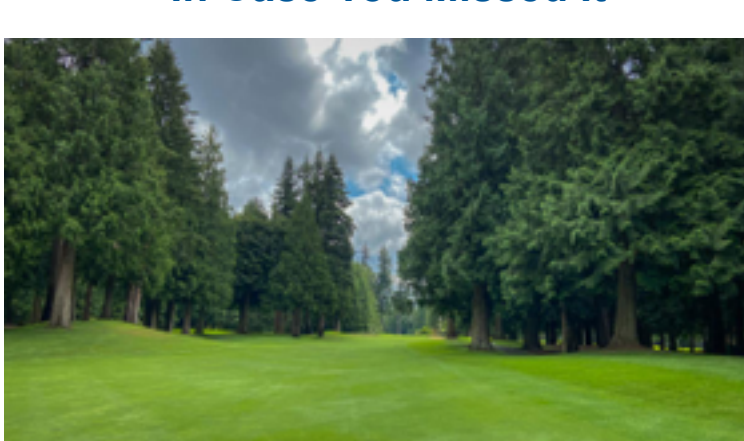

Be Ready for Severe Storms

In the past two years, a significant number of hurricanes and severe storms affected the Southeast. Successful golf course recovery requires planning for before and after storms.

In Case You Missed It

Tree management is an emotional issue at golf courses and strong feelings about trees can prevent necessary management. This is why developing a comprehensive tree management plan is so important. In the October 1 issue of the *USGA Green Section Record*, we explained how to develop an effective tree management plan that will help your facility make good decisions about trees with less conflict.

Coming Up Next Issue

Ultradwarf bermudagrasses have many positive qualities, but they also have the limitation of being vulnerable to damage from exposure to cold temperatures. In the November 5 issue of the *USGA Green Section Record*, we'll present current research about reducing the risk of winter injury on ultradwarf putting greens that can help you protect your putting surfaces as colder weather begins to arrive.
