FOR THE GOLFER

Creating and Protecting Habitat on the Golf Course

Creating and protecting habitat on golf courses is a team effort between superintendents, golfers, scientists and many others – with benefits that go far beyond the course.

Regional Updates

WEST

Is Your Subsurface Drip System Dripping?

It can be hard to tell if subsurface drip irrigation systems are working properly, but this simple indicator makes it easy.

NORTHEAST

Consistency Over Intensity

When it comes to managing putting green organic matter, don't underestimate the power of a consistent topdressing program.

SOUTHEAST

Made in the Shade

Shade plays a key role in many turfgrass problems – including weed issues like this year's bumper crop of *Poa annua* in the Southeast.

More From The Green Section Record

In Case You Missed It

While there is no one-size-fits-all program for managing ultradwarf bermudagrass putting greens, many lessons have been learned since these grasses first started being used over 25 years ago. In the May 6 issue of the USGA *Green Section Record*, we provided an overview of the management practices commonly used to provide high-quality putting conditions throughout the season.

Coming Up Next Issue

Developing an agronomic program for one turf species is challenging enough, but many superintendents find themselves with a mixed stand of creeping bentgrass and *Poa annua* on their putting greens. In the June 3 issue of the USGA *Green Section Record*, we look at the key strategies required to find balance in mixed-stand putting greens, or to favor one grass over the other.
