A Quick-Start Guide to Putting Green Data Collection

Today's superintendents have the ability to collect and analyze mountains of data, but it's not always easy to decide how much information to collect or what will be most valuable to the turf management program. This article provides a framework for how to approach data collection and a structure of what to do every day to get the best results. A few cautionary notes will also be offered to help superintendents avoid some of the pitfalls and distractions that can come with data collection. Remember, the data should be working for you – not the other way around!

Latest From Course Care

Using Turf Colorants on Golf Courses

Using turf colorants instead of overseeding is helping some golf courses to improve playing conditions throughout the year while saving water, fuel, labor and other critical resources.

The Realities of Winter Golf: 5 Things Every Golfer Should Know

Winter golf is not easy for courses to manage, but golfers can help by understanding the realities of the season. No matter where you are, colder weather and shorter days impact conditions.

Regional Updates

Can Dormant Bermudagrass Be Damaged?

As golfer activity ramps-up in the Southwest, bermudagrass growth continues to slow. Non-overseeded bermudagrass will be extremely vulnerable to damage for the next few months.

Finding the Griswold Family Tree

Tree work is one of the most common projects on golf courses during the offseason. Having a plan and using the right tools to identify tree issues will ensure it's time well spent.

Mobile Irrigation Backup Plan

Having a backup plan to water high-profile areas is never a bad idea. A water wagon is a simple way to keep turf alive in case the irrigation system is inoperable for any reason.

Time to Tackle Those Weeds

Late-season weed control can be effective, but it's also risky. Correctly identify the target, follow recommended rates and make required follow-up applications to get good results.
