world record for migration distance. Two other Massachusetts courses, Hyannisport Country Club and New Seabury Golf Course, also have been successful with osprey nest platforms. Assistance in platform design and location for these two golf courses was provided by Mr. Fernandez and Bill Davis of the Massachusetts Division of Fisheries and Wildlife.

The osprey range is not exclusive to Massachusetts. This species can be found in various areas of the country — along waterways and ocean coastlines, wherever tall tree snags or poles can be found for nesting and fish can be found for eating. There are five large regional osprey populations: Atlantic Coast, Florida, Gulf Coast, Pacific Northwest, and Great Lakes region.

## Is Your Golf Course Suited for an Osprey Platform?

Not all sites are suited for the osprey. Essential elements for a successful osprey program include: · Large bodies of water near the course.

• Good fishing grounds such as bays, wetlands, lakes, ponds, and rivers that provide a good supply of uncontaminated fish.

• Open areas for the osprey platform location. Platforms located too close to tall trees will not be used due to fear of predation by great horned owls.

• Isolated areas for the nest platform or a means of restricting human interaction. Golfers passing by are generally not a concern, especially when the nest is mounted at a 30- to 40-foot height.

• Osprey populations need to be existing in the area. Osprey do not readily colonize new areas, and therefore it is not recommended that platforms be put up in hopes of getting one to nest.

· Nest platforms with predator guards.

### **Nest Platforms**

There are numerous osprey programs throughout the nation administered by the state fish and game divisions. These programs offer information about the bird and provide construction guidelines for osprey platforms. Specific dimensions and mounting height will vary and are not considered critical. For example, a nest platform in an open marsh that is remote from human activities can be mounted at 15-foot height and be successful. The nest platform on a golf course where golfers may pass by regularly needs to be mounted much higher, approximately 30 to 40 feet high to provide privacy. The most important aspect of any osprey program is to meet the bird's needs by providing a platform in an appropriate location.

For help and more information on osprey, contact your state fish and wildlife division. Inquire about the status of the osprey populations in your area and whether your golf course site is suitable for an osprey nest platform. The Audubon Society of New York State, administrators of the Audubon Cooperative Sanctuary System, also provides information on the osprey and can help you identify osprey experts in your region.

## **ALL THINGS CONSIDERED**

# **The Religion of Golf**

### by LARRY GILHULY

Director, Western Region, USGA Green Section

'S IT MY IMAGINATION, or is there a movement underway out there among a small but widely distributed and vocal group of golfers who actually believe the GAME of golf is more than just a game? These fanatics insist that under all circumstances the putting surfaces should be maintained at or above 10 feet on the Stimpmeter; the fairways should be totally green, yet firm and with no wet areas; the bunkers should be in perfect condition with no bad lies; and tees must be perfectly flat and mowed to a height that only a military barber could appreciate! At the same time, they also want roughs at 2 inches or higher, and the course must be set up for championship conditions at all times. They completely forget that most golf courses are played by golfers with handicaps of 16 and above.

Guess who's caught in the middle of this? You've got it — the golf course superintendent. Regardless of the type of irrigation system, drainage, trees, topography, weather patterns, grass species, amount of play, size of greens, soil type, and countless other variables the superintendent must deal with, they are expected by this vocal minority to perform miracles in growing turf.

I would remind this minority of vocal players of one thing: Golf is a game that is supposed to be fun! Sure it can be exasperating and difficult. However, it is not a matter of life and death. If your ball lands in a wet spot, play it. If it's buried in a bunker, hit the ball and continue on your way. If the ball comes up a bit short on your first putt, remember to adjust your putting stroke for the rest of the round.

For those who are starting to recognize themselves, allow your superintendent to do the following:

 Maintain greens at a moderate speed that puts healthy turf first and speed second. Most golfers prefer smoothness over speed, and an 8- to 9-foot Stimpmeter reading is entirely acceptable when the greens are smooth.

• Maintain firm conditions, but don't force the superintendent into losing control of large areas of turf by insisting that irrigation practices be changed to suit your game. Remember, one of the superintendent's main functions is to keep players from messing up their own golf course!

• Realize that the golf course superintendent has a staff and a family that rely on his decision-making skills. It should be a game to you, but it is a livelihood for the superintendent. Remember this the next time you explode after missing a 4-footer and immediately blame everyone but yourself!

I hope everyone recalls these thoughts the next time they tee it up. It truly does put the GAME of golf in its proper perspective. Say Hallelujah!
