Putting Greens: When is it Time to Rebuild?

Is it time to rebuild your greens? The prospect of having to take one or more of your greens out of play can be a difficult decision for any course due to the major disruptions to golfers, as well as the cost. John Foy and Larry Gilhuly will help answer many of the most difficult questions that are asked by golfers and superintendents alike regarding when and if the rebuild process is necessary.

What’s Driving Turf Performance?

Have you recently been noticing unusual areas of dry, off-color turf throughout your golf course? Poor irrigation coverage is an easy problem to diagnose, but what about those areas where water can’t get to the roots? There may be an answer to your problem below the surface, and it’s not enough to just water them during hours of operation. Instead, you should be using a compatible surfactant to help the water penetrate the surface layers of turf root systems more effectively.

Get Into the Habit of BMPs

Best Management Practices (BMPs) are broad principles and are being implemented around the world in order to ensure environmental and economic sustainability. BMPs can also be applied to golf courses, helping you to minimize the amount of water, fuel, labor, fertilizers and pesticides you use. In this video, USGA Agronomist Adam Moeller explains how alternative methods of managing rough can result in reduced consumption of resources such as water, fuel, labor, fertilizers and pesticides.

Naturalized Areas on Golf Courses

Naturalized areas are found on most golf courses and can contribute to the overall aesthetic beauty of a golf course. These areas add to the course’s character and provide a unique space for wildlife. The USGA highlights case studies from across the U.S. that showcase real-world solutions and efficient utilization of our most valuable resources. BMPs are broad principles. The golf industry should get into the habit of implementing BMPs around the world in order to ensure environmental and economic sustainability.

The USGA Green Section is divided into four regions staffed by agronomists who work with golf facilities on care of the golf course. USGA agronomists provide regular regional updates outlining current issues and observations from the field. Be sure to view updates from multiple regions as featured ideas, techniques and solutions to problems often apply to other parts of the country.
