The USGA Green Section Record (ISSN 2156-5813) is published biweekly via electronic mail by the United States Golf Association®.

Policies for the Reuse of USGA Green Section Publications

1) Acknowledgment of Source: Reuse of Green Section material is allowed only if you properly acknowledge the source. Typically, this is done by including the following in your reuse: “© USGA. From the USGA Green Section Record, [Issue Date | Edition].”

2) Limited Distribution: Reuse of Green Section material is allowed only if you distribute the material to others at no cost and in no form other than digital (electronic). Reproduction, including the production of copies and photographic reproductions of any kind, or translations into another language, is not allowed without written permission.

3) Notification of your Intent To Reprint Content: Notification of your intent to reuse Green Section material is required and must be directed to: Reprints, USGA, PO Box 708, Far Hills, NJ 07931; or email: Reprints@usga.org. Include the following information in your notification: your name, affiliation, address, phone number, and email address; the intended use of the material (e.g., presentation, article, book); the intended distribution; and the intended audience (e.g., professionals, golfers).

USGA agronomists provide regular regional updates outlining current issues and observations from the field. Be sure to view updates from multiple regions as featured ideas, techniques and solutions to problems often apply to other parts of the country.

- Latin America Amateur Championship: Cooperation Evolves From The Ground Up

Best Management Practices (BMPs) in golf course management are critical for the protection and efficient utilization of our most valuable resources. BMPs are broad principles. The golf course manager implements these concepts with specific actions pertinent to the golf course.

- Todd Lowe. He replaces John Foy, who retired from the USGA staff Dec. 1, 2015, after 30 years as an agronomist for the Green Section.

- Historical pathogenicity of Rhizoctonia species as affected by temperature and salinity on turfgrass was studied by Alex Thomas and colleagues. Thomas has a B.S. in plant pathology from the University of Georgia. In 2011, he received a Ph.D. in plant pathology from the University of Florida. His research involved a two-year scouting program on golf courses to identify and quantify the susceptibility and pathogenicity of Rhizoctonia species as affected by temperature and salinity on turfgrass. Thomas is now an agronomist for the USGA Green Section, responsible for regional agronomy.

- A deep understanding of turf care products.

- Steve Carr began his career with ISK Biosciences in the early 1990s and, through a series of mergers and acquisitions, ended his 25-year career with Syngenta in 2015. His experience as a technical specialist and, most recently, as Syngenta’s global technical manager for abiotic stress mitigation provided years of experience problem solving on golf courses and gaining a deep understanding of turf care products.

- USGA Green Section products have been assembled into a single, easy-to-use 2015 Compendium.

- The right tree in the right location can be a priceless asset to a golf course, but trees that are planted in the wrong location can generate a variety of problems. Video: Managing Trees on the Golf Course.

- At Casa De Campo in the Dominican Republic. View Now

- The USGA highlights case studies from across the U.S. that showcase real-world solutions.
